SOCIAL AND PROFESSIONAL ISSUES

The concept map shows how Information Technology affects society by improving the standard of living, worker productivity, healthcare, and education. IT helps improve daily life through faster communication, easier access to online services, useful information, and better opportunities for people in rural or underdeveloped areas. It also increases worker productivity by automating tasks, helping workers finish faster, improving communication, and supporting telework. In healthcare, IT supports Electronic Health Records, online consultation or telemedicine, faster access to patient information, and better communication between doctors, nurses, and patients. In education, IT provides online learning materials, supports digital literacy, helps teachers create computer-based lessons, and gives rural students access to learning through low-cost devices. Overall, the module shows that IT improves efficiency and quality of life by making important services and opportunities more accessible.
